DEDICATION

To the soul of the teacher who
devoted his life to people

To Dr. Diaa Al-Awady

May Allah have mercy on him

*“Your body is not based on extraction -
your body is based on manufacturing.”*

From the words of Dr. Diaa

DR. DIAA AL-AWADY

- May Allah have mercy on him -

Professor of Natural Medicine • Founder of the Al-Tayyibat System

A scholar and researcher in natural medicine and therapeutic nutrition, he devoted his life to teaching people how to understand their bodies and regain their health through food instead of medication. His vision is summarized in one profound idea: the body is created sound and complete, and disease is not its origin, but the result of repeated incorrect inputs.

Dr. Diaa developed what became known as the “Al-Tayyibat System” - a dietary system based on understanding the body as an integrated factory, not merely an extractor of components. He presented twenty-five scientific theories that reveal the hidden relationships between food and disease.

CHAPTER ONE

PHILOSOPHY OF THE SYSTEM

"The body is based on manufacturing, not extraction."

The Al-Tayyibat System is not a diet, but a philosophy for understanding the human body as Allah created it. Its foundation is that the body is an integrated factory that knows how to make what it needs from simple basic components and does not need to extract ready-made substances from pills and supplements.

What the body needs is clean inputs from the good things Allah created, and relief from harmful things made by humans. When you stop introducing toxins - from modern dairy, white flour, hormone-treated poultry, and chemical medicines - the body begins to repair itself automatically.

"Health is the natural state - disease is the deviation." - Dr. Daa Al-Awady

PHILOSOPHY OF THE SYSTEM

The body is a factory, not an extractor

The Al-Tayyibat System did not arise from an idea about dieting, but from a deep philosophy about the nature of the human body. Its foundation is that Allah created the body complete and integrated, able by its natural disposition to manufacture everything it needs from simple basic components.

1. The body manufactures; it does not extract

The body does not take cholesterol ready-made from food; it manufactures it itself. It does not require complex plant protein; it breaks any protein down into amino acids and then builds what it needs. It does not extract vitamin D from pills; it makes it from cholesterol and sunlight. All it needs is simple, clean inputs.

2. Disease is a result, not an origin

Chronic diseases are not surprises that suddenly strike the body, but cumulative results of incorrect inputs over years: processed food, chemical medicines, chronic stress, and environmental toxins. The body displays symptoms as a cry for help, not as a sudden attack.

"Health is the natural state - disease is the deviation. You do not need to repair the body; you need to stop damaging it." - Dr. Diaa Al-Awady

THE SOVEREIGN BODY

Respect the sovereignty of your body and regain your well-being

“The Sovereign Body” is the central principle on which Dr. Daa Al-Awady built his entire system. The body is sovereign over itself: it knows what it lacks, repairs what is damaged, and adapts to every challenge whenever it receives clean inputs and is relieved of toxins.

1. The Golden Rule

“Zero toxic inputs = 100% health.” The body is equipped with remarkable self-healing mechanisms: autophagy, mitochondrial renewal, tissue rebuilding, and toxin clearance. They work automatically when given the opportunity.

2. Medicines relieve symptoms; they do not treat causes

Chemical medicines address symptoms rather than causes. Headache painkillers do not solve a stomach problem. Blood-pressure medicines do not correct nutritional imbalance. Diabetes medicines do not restore insulin sensitivity. The body first needs the damaging inputs to stop, then it begins repairing itself.

3. Understand your body and lose your fear

When you understand that cholesterol is not the enemy, that fat is a true energy source, that cancer is a result rather than a beginning, and that high insulin is a cause of obesity rather than eating fat, you become free from fears planted by medical media and rebuild a relationship of trust and cooperation with your body.

THE GOLDEN RULES

Six essential rules for following the system

Before allowed and prohibited foods come the six rules. They are not optional; they are the foundation of the whole system. Following them strengthens the results of healthy foods, while neglecting them undermines any attempt to comply.

Eat only when hungry

Respond only to real hunger, not habit or boredom. Real hunger is your guide to eating.

Do not eat until completely full

Set the amount you need and stop one step before fullness. Overfilling burdens digestion and disrupts hormones.

Weekly and monthly fasting

Mondays and Thursdays each week, and the white days (13th, 14th, and 15th of the lunar month). Fasting renews mitochondria.

Natural vinegar daily

A cup of water after eating with natural vinegar supports digestion and balances blood sugar after meals.

Warm water on an empty stomach

In the morning before anything else. Warm water stimulates the digestive system and liver and supports cleansing.

Light daily exercise

Walking or simple exercise. The body needs movement as it needs food; it activates mitochondria and lymphatic circulation.

Doctor's note: "Commitment is the condition for success. A partial system gives no results. Full commitment is the only path to healing."

FREQUENCY INDICATOR

How often should you eat each item? - Four levels

It is not only what you eat, but how often you eat it. This is one of Dr. Daa's golden rules. Even allowed foods have frequency limits, and each of the four levels defines how heavily the item should be relied upon.

CORE

No restriction (with every meal)

Examples: rice, dates, ghee, potatoes, sugar, local butter, olive oil. These foods form the backbone of the system and may be eaten in most meals in reasonable amounts.

DAILY

Once a day

Examples: toast, cooked cheese, olives, honey, nuts. Nutritious and useful foods that should not be overused; once a day is enough.

WEEKLY

Fish once; meats in rotation

Examples: veal, lamb, marine fish, pigeon, fruits. Animal proteins and fruits require greater digestive effort; weekly rotation preserves balance.

OCCASIONALLY

About once a month

Examples: dark chocolate, natural jams, stuffed vegetables. Allowed but exceptional foods, eaten for occasions or at long intervals so they do not replace the staples.

CHAPTER TWO

ALLOWED FOODS*What Allah has permitted of the good things*

The good things are the foods Allah has permitted for His servants: foods that accord with their natural disposition and benefit their bodies, created to be eaten in their natural form without processing that spoils them or treatment that removes their blessing.

In this chapter we review twelve categories of natural foods on which the Al-Tayyibat System is based. Each category has its own properties, timing of use, and benefits as described by Dr. Daa Al-Awady. For each item, the book also gives a specific scientific benefit so the reader understands why it is allowed.

"Good food is what comes from the earth as Allah created it. When humans interfere with it, they spoil it." - Dr. Daa Al-Awady

STAPLES AND NATURAL SEASONINGS

8 items · with the scientific benefit of each item

Staples are the backbone of the Al-Tayyibat System. They are relied on without restriction in most meals

CORE	Egyptian White Rice Cooked without salt or garlic - a staple of the system in whatever form it is prepared. Scientific note: Simple starch that digests quickly and provides rapid energy without burdening the colon.
CORE	Extra-Virgin Olive Oil From a blessed tree - for food and topical use. Scientific note: Rich in monounsaturated fatty acids; supports biological cholesterol production.
CORE	Natural Local Butter Fresh local butter - allowed in moderation. Scientific note: Source of short-chain fats and vitamins A/D/E/K2; supports mitochondria.
CORE	Natural Local Ghee Natural local ghee is allowed. Scientific note: Heat-stable fat, free of irritating milk proteins; clean energy.
CORE	Natural Sugar Sugar is allowed - up to 15 tablespoons daily to energize the body. Scientific note: Quick fuel for the brain and liver; supports immediate energy production.
CORE	Natural Cream Natural cream and butter are basic allowed foods. Scientific note: Clean milk fat with fat-soluble vitamins.
WEEKLY	Natural Tahini (Sesame) Pure sesame tahini without additives is allowed. Scientific note: Rich in organic calcium and zinc; supports bones and immunity.
WEEKLY	Fig, Apricot and Strawberry Jams Natural fruit jams are allowed at intervals. Scientific note: Natural carbohydrate source when prepared without industrial additives.

STARCHES AND GRAINS

6 items · with the scientific benefit of each item

Natural starches are a preferred energy source - they digest slowly and nourish the colon

CORE	Potatoes Mashed with butter, boiled, fried, roasted - or natural potato chips. Scientific note: Complex starch and high potassium support fluid and electrolyte balance.
CORE	Sweet Potatoes Allowed in all forms - mashed with butter or roasted. Scientific note: Rich in beta-carotene and gentle fiber; raises blood sugar moderately.
CORE	Rice of All Types Basmati, Thai, white, brown - even rice with vermicelli is allowed. Scientific note: Pure, gluten-free starch that digests easily without burdening the intestines.
CORE	Whole-Wheat Toast Whole-wheat toast with butter - allowed in reasonable amounts. Scientific note: Whole grains retain bran and germ and nourish beneficial bacteria.
WEEKLY	Natural Popcorn Natural popcorn is allowed at spaced intervals. Scientific note: Whole grain with high fiber; a safer snack than processed baked goods.
WEEKLY	Roasted Corn Corn at spaced intervals. Scientific note: Fiber and B vitamins; slow-release energy.

FRUITS - PART ONE

6 items · with the scientific benefit of each item

Fruit is Allah’s sweet blessing - and each fruit has its own character and season

WEEKLY

Grapes (Black/Red/Green)

Preference order: black, then red, then green - among the best fruits.
Scientific note: Rich in resveratrol and phenolic antioxidants; supports vessel lining.

WEEKLY

Fresh Pomegranate (Seedless)

Fresh pomegranate and its juice - allowed in natural amounts.
Scientific note: Punicalagin supports mitochondrial health and provides strong antioxidants.

WEEKLY

Peeled Apple

Eat only after peeling; do not eat the peel.
Scientific note: Pectin and vitamin C support regularity without coarse fiber.

WEEKLY

Banana

Allowed in moderate amounts.
Scientific note: Potassium and magnesium for the nervous system; resistant starch feeds beneficial bacteria.

WEEKLY

Cherries

Cherries, red grapes, and figs are allowed - not daily.
Scientific note: Anthocyanins with anti-inflammatory properties; may support joints and sleep.

WEEKLY

Fresh Strawberries

Fresh strawberries, with attention to quantity.
Scientific note: Antioxidants and vitamin C support vessel walls and collagen production.

FRUITS - PART TWO

6 items · with the scientific benefit of each item

Continuation of the fruits allowed in the system - choose the appropriate season

WEEKLY

Apricots and Plums

Apricots and plums are allowed.

Scientific note: Beta-carotene and vitamin A support vision and immunity.

OCCASIONALLY

Seedless Guava

Seedless guava is allowed; seedless pomegranate is also allowed.

Scientific note: Very high vitamin C - stated as four times that of oranges.

WEEKLY

Fresh and Dried Figs

Figs are among the blessed fruits mentioned in the Qur'an.

Scientific note: High fiber, organic calcium and iron; supports digestion and blood.

DAILY

Dates of All Types

Seven dates on an empty stomach, as cited in the source.

Scientific note: Balanced natural sugars, potassium, and magnesium; immediate energy.

WEEKLY

Raisins and Dried Berries

Dried fruit as a natural sweet in moderate quantities.

Scientific note: Iron and fiber; described in the source as supporting anemia naturally.

WEEKLY

Natural Packaged Juices

Guava, grape, cherry, berry, and apricot drink; fresh juices are prohibited in the source.

Scientific note: Heat sterilization is described as preserving sugar in a gentler form for digestion.

MEATS AND PROTEINS

7 items · with the scientific benefit of each item

Red meats in weekly rotation, focusing on animals that eat plants

WEEKLY

Veal and Beef

Boiled only and well cooked; beef, buffalo, and camel meat are staples.
Scientific note: Highly absorbable heme iron, vitamin B12, and complete amino acids.

WEEKLY

Camel Meat

Described as one of the best meats in the system.
Scientific note: High-quality protein, lower uric acid claim in source, and clean fats.

WEEKLY

Lamb

Boiled or grilled with salt and oil only - once weekly.
Scientific note: Rich in carnitine, which carries fatty acids to mitochondria.

WEEKLY

Goat Meat

Allowed - up to twice weekly.
Scientific note: Less fat than lamb; iron, magnesium, and vitamin B12.

WEEKLY

Rabbit Meat

Allowed every other day, not daily.
Scientific note: Light, low-fat protein; easy to digest for those with digestive problems.

WEEKLY

Livestock Liver

Liver from livestock except chicken; minced meat and trotters are also allowed.
Scientific note: A rich natural source of vitamin A, iron, B12, and copper.

WEEKLY

Stuffed Intestines (Mombar)

Stuffed and fried mombar is allowed.
Scientific note: Natural collagen; supports skin, joints, and the digestive tract.

FISH AND MARINE PROTEIN

3 items · with the scientific benefit of each item

Only natural marine fish - farmed fish are prohibited in the source because of hormone concerns

WEEKLY

Fresh Sardines

Fresh grilled sardines - among the allowed fish.
Scientific note: Omega-3 (EPA/DHA) is essential for cell and brain membranes; natural vitamin D3.

WEEKLY

Sea Fish That Feed on Fish

Fish that naturally feed on other fish are described as beneficial.
Scientific note: High concentration of essential fatty acids and trace minerals such as selenium and iodine.

WEEKLY

Natural Mackerel and Tuna

Large open-sea species are allowed.
Scientific note: Excellent source of omega-3 and fat-soluble vitamins.

ALLOWED BIRDS

2 items · with the scientific benefit of each item

The allowed birds are those that fly and eat clean grains, unlike raised poultry

WEEKLY

Pigeon

Flying pigeons are described as the accepted birds, feeding on clean grains.
Scientific note: Clean protein, high iron, and described as free of hormones and antibiotics.

WEEKLY

Quail and Migratory Birds

Quail and migratory birds are allowed.
Scientific note: Feed freely from nature; their meat is described as clean and balanced.

HONEY AND NATURAL PRODUCTS

5 items · with the scientific benefit of each item

Honey is healing as described in the Qur'an - and bee products are among the greatest good foods

DAILY	Natural Bee Honey Described as healing for people - one spoon daily on an empty stomach. Scientific note: Bioactive enzymes, antimicrobial flavonoids, immediate energy.
WEEKLY	Blackstrap Molasses Natural molasses is described as an excellent iron source. Scientific note: Iron, manganese, and calcium in organic form; supports hemoglobin production.
WEEKLY	Beeswax Beeswax is allowed and considered beneficial. Scientific note: Long-chain fatty acids, antioxidants, and immune support.
WEEKLY	Royal Jelly Described as one of the strongest natural nutrients known. Scientific note: Proteins and B vitamins at high concentration; supports fertility and immunity.
WEEKLY	Natural Bee Pollen Used in small amounts as a natural supplement. Scientific note: Complete protein plus almost all vitamins; described as a complete food from nature.

NATURAL OILS AND VINEGAR

5 items · with the scientific benefit of each item

Cold-pressed natural oils and natural vinegar are described as two foundations for digestion

DAILY	Corn and Sunflower Oil Corn oil for frying is described as beneficial. Scientific note: Essential omega-6 fatty acids; described as heat-stable for deep frying.
WEEKLY	Natural Sugarcane Vinegar Natural vinegar is a system staple - a cup of water after food with vinegar. Scientific note: Acetic acid supports stomach acidity and improves post-meal glucose response.
WEEKLY	Pickled Olives (Kalamata) Olives of all types are allowed; choose the highest quality. Scientific note: Strong polyphenols, monounsaturated fat, and fermentation bacteria.
WEEKLY	Natural Apple-Cider Vinegar Unpasteurized, containing the live “mother.” Scientific note: Probiotic bacteria; supports digestion and mineral absorption.
CORE	Local Extra-Virgin Olive Oil For salads and drizzling on food - not for deep frying. Scientific note: Strong polyphenols; oleic acid supports heart and brain.

HOT DRINKS AND HERBS

4 items · with the scientific benefit of each item

Natural drinks stimulate the body and support digestion - the source says to avoid black tea completely

DAILY	Trusted Turkish Coffee Turkish coffee from a trusted source. Scientific note: Natural caffeine stimulates mitochondria; chlorogenic acid supports the liver.
WEEKLY	Green Tea Allowed - presented as the healthy alternative to black tea. Scientific note: EGCG and catechins support fat oxidation and nerve-cell protection.
WEEKLY	Natural Thyme As a drink or on food. Scientific note: Thymol and carvacrol are natural antimicrobial compounds; supports the respiratory system.
WEEKLY	Anise, Caraway and Cumin Classic digestive herbs - taken after food. Scientific note: Volatile oils may reduce bloating and cramps and support digestive secretions.

ALLOWED CHEESES

5 items · with the scientific benefit of each item

Only cooked/fermented cheeses - white cheese and cottage cheese are prohibited in the source

WEEKLY

Gouda Cheese

Among the allowed cooked cheeses.

Scientific note: Vitamin K2 for bones and arteries; fermented protein that is easier to digest.

WEEKLY

Edam Cheese

Edam is among the allowed cheeses.

Scientific note: Available calcium; very low lactose because of prolonged fermentation.

WEEKLY

Mozzarella Cheese

Natural mozzarella is allowed.

Scientific note: Lower-lactose protein; bioavailable calcium.

WEEKLY

Cheddar Cheese

Cheddar is allowed.

Scientific note: Long fermentation reduces lactose; vitamin A and calcium salts.

WEEKLY

Roquefort / Kashkaval

Roquefort and Kashkaval are allowed.

Scientific note: Beneficial fermentation bacteria, vitamin B12, and zinc.

NATURAL SWEETS AND REMEDIES

7 items · with the scientific benefit of each item

Natural sweets, nuts, and plant remedies - enjoyment and health together

WEEKLY

Dark Tahini Halva

Tahini halva is allowed; traditional nougat is also listed as allowed.

Scientific note: Calcium and zinc from sesame; natural energy.

DAILY

Nutella

Allowed morning and evening only, according to the source.

Scientific note: Hazelnut and cocoa; energy and quick digestion.

OCCASIONALLY

Dark Chocolate (70%+)

Dark chocolate and cocoa are allowed.

Scientific note: Flavanols support the heart; magnesium and iron.

WEEKLY

Almonds, Cashews and Peanuts

For memory support; pistachios and walnuts are also included.

Scientific note: Omega fats, vitamin E, magnesium; support brain and immunity.

WEEKLY

Frankincense (Boswellia)

For joints: soak and drink, or chew.

Scientific note: Boswellic acids are described as strongly anti-inflammatory and helpful for joint pain.

WEEKLY

Greek Mastic

For stomach ulcers - soaked with coconut butter on an empty stomach.

Scientific note: Described as inhibiting H. pylori and protecting the stomach lining.

OCCASIONALLY

Stuffed Zucchini, Eggplant and Peppers

Zucchini and eggplant may be eaten stuffed with rice or meat.

Scientific note: Cooked vegetables stuffed with rice are described as a gentle digestive combination.

CHAPTER THREE

PROHIBITED FOODS*What harms the body and the alternatives*

The prohibited foods in the Al-Tayyibat System are not arbitrary restrictions. The book presents them as foods that, through science and experience, damage body systems: burdening mitochondria, disturbing the colon, confusing hormones, and preparing an environment for chronic disease.

This chapter reviews nine categories of prohibited foods, with the stated benefit of avoiding them and allowed alternatives for each. Commitment is described as essential: a partial system gives no results, and mixing allowed and prohibited foods cancels the effect of the system.

"You cannot nourish a cell trapped in toxins - zero toxic inputs = 100% health." - Dr. Daa Al-Awady

POULTRY AND EGGS

4 items · with allowed alternatives

Raised poultry and industrial eggs are presented as major sources of hormonal stress in modern food

PROHIBITED

Chicken and Poultry

Eat from the ground and waste; raised in environments described as contaminated by hormones and antibiotics, affecting the hormonal axis.

Alternative: Pigeon · quail · veal · rabbit · fish

PROHIBITED

Eggs of All Types

The source says eggs affect the colon and cause bloating, especially with modern industrial raising, and prohibits them in any cooked form.

Alternative: Protein from allowed meats and fish; natural cream for breakfast

PROHIBITED

Duck and Goose

High accumulated fat; modern raising is described as making them unhealthy.

Alternative: Pigeon and quail as allowed bird alternatives

PROHIBITED

Turkey

Presented as having the same problems as raised poultry: growth hormones and antibiotics.

Alternative: Red meat in moderate weekly amounts

MILK AND DAIRY PRODUCTS

4 items · with allowed alternatives

Modern dairy is described as radically different from traditional dairy; processing and homogenization are said to alter its natural structure

PROHIBITED	Milk of All Types The source says it causes bloating; lactose irritates the colon, and modern casein is difficult to digest after industrial modification. Alternative: Local butter, local ghee, and natural cream
PROHIBITED	Yogurt of All Types Described as causing bloating and disturbing bacterial balance in the colon. Alternative: Natural vinegar for digestion; natural honey on an empty stomach
PROHIBITED	Labneh and Cream Products Modern fermented dairy products are described as different from traditional dairy and causing digestive disturbance. Alternative: Local butter and natural cream
PROHIBITED	Powdered Milk Dried at high heat, described as damaging protein structure, with industrial additives. Alternative: Avoid completely; use meat and fish as listed alternatives for nutrients

PROHIBITED CHEESES

3 items · with allowed alternatives

Fresh uncooked cheeses retain, according to the source, the full problems of raw milk

PROHIBITED	White Cheese Uncooked; retains raw-milk issues and is described as causing digestive disturbances. Alternative: Gouda · Cheddar · Mozzarella · Edam (cooked/fermented)
PROHIBITED	Cottage Cheese Same issues as white cheese; high lactose and casein not modified by fermentation. Alternative: Cooked fermented cheeses such as Cheddar, Gouda, and Edam
PROHIBITED	Cream Cheese and Spreads Industrial additives, emulsifiers, and high water content are described as creating an irritating bacterial environment. Alternative: Natural local cream or cooked cheeses

FLOUR AND BAKED GOODS

5 items · with allowed alternatives

Modern baked goods rely on refined white flour + rapid yeast + chemical improvers

PROHIBITED

White Flour and Its Products

Stripped of bran and germ; raises sugar sharply; described as containing industrial bleaches and chemical improvers.

Alternative: Whole-wheat toast, rice, potatoes

PROHIBITED

Pasta of All Types

Processed white flour; described as causing sharp sugar rises and pancreatic stress.

Alternative: Rice of all types, rice with nuts, rice with vermicelli

PROHIBITED

Traditional Flatbread, Pita and White Rolls

Modern yeast and chemical improvers are described as making them very different from traditional bread.

Alternative: Whole-wheat toast in moderate amounts

PROHIBITED

Croissants and Pastries

White flour + industrial shortening + refined sugar, described as a harmful combination for colon and mitochondria.

Alternative: Sweet potato mashed with butter as a natural sweet

PROHIBITED

Biscuits, Cookies and Kahk

White flour + hydrogenated oils + refined sugar, described as a complete load of harmful inputs.

Alternative: Tahini halva, dried fruit, dates with honey

PROCESSED STARCHES

4 items · with allowed alternatives

Modern processed starches are described as having lost nutritional value and becoming sources of pancreatic stress

PROHIBITED	Eastern Sweets (Kunafa, Zalabia) White flour, industrial ingredients, and hydrogenated shortening. Alternative: Dark tahini halva; dried fruit with honey
PROHIBITED	Pizza and Pies White flour + white cheese + industrial additives; each is prohibited individually in the source. Alternative: Rice with cooked vegetables; or stuffed foods with rice and meat
PROHIBITED	Couscous and Quinoa Described as processed grains that lost their original structure and behave like refined starches. Alternative: Rice of all types
PROHIBITED	Oat and Digestive Biscuits Presented as misleading health marketing; in the source they are refined flour with hidden sugar. Alternative: Natural popcorn; raw nuts

INDUSTRIAL BEVERAGES

5 items · with allowed alternatives

All industrial beverages are prohibited without exception in the source, even those marketed as healthy

PROHIBITED

Soft Drinks and Cola

Phosphoric acid is said to deplete calcium; industrial sugars and colors burden the liver.

Alternative: Warm water on an empty stomach; natural packaged juices

PROHIBITED

Energy Drinks

Industrial caffeine + sugars + flavorings are described as exhausting the adrenal glands.

Alternative: Natural Turkish coffee; green tea

PROHIBITED

Black Tea

Long fermentation is described as creating compounds that interfere with iron absorption and irritate the colon.

Alternative: Green tea, thyme, Turkish coffee

PROHIBITED

Alkaline and Enhanced Water

Industrial alteration of water is described as disturbing mineral balance and stomach acidity.

Alternative: Ordinary warm water

PROHIBITED

Barley Drinks and Beer

Fermentation + alcohol even when removed + industrial ingredients and flavors.

Alternative: Water, herbs, coffee, green tea

LEGUMES AND LEAFY GREENS

4 items · with allowed alternatives

Legumes and leafy greens are commonly promoted as healthy, but the source describes hidden harms for the colon

PROHIBITED	Fava Beans, Lentils, Chickpeas and Beans Contain antinutrients (lectins, phytates) described as hindering absorption and causing bloating and indigestion. Alternative: Protein from allowed meats and fish
PROHIBITED	Leafy Greens (Arugula, Lettuce, Parsley) Oxalates and chlorophyll in amounts described as burdening the colon and being less useful than promoted. Alternative: Potatoes, rice, allowed fruits
PROHIBITED	Grape Leaves, Cabbage and Spinach High oxalates described as accumulating in the kidneys; chard and mallow are said to have the same issue. Alternative: Stuffed rice dishes without leafy wrappers
PROHIBITED	Salads of All Types Raw vegetables are described as irritating the colon and making digestion difficult. Alternative: Cooked vegetables stuffed with rice or meat

PROHIBITED FRUITS AND VEGETABLES

5 items · with allowed alternatives

Not every fruit and vegetable is classified as “good” in the system; the source says some problems appear only by observing the body

PROHIBITED	Watermelon and Melon Very high sugar with water; described as causing a sharp rise and rapid drop in blood sugar. Alternative: Grapes, pomegranate, peeled apple
PROHIBITED	Orange, Kiwi and Lemon Strong acids described as depleting body minerals and affecting kidneys and colon. Alternative: Grapes, pomegranate, strawberries, cherries
PROHIBITED	Avocado and Papaya Plant fats described as difficult to digest; enzymes may irritate a sensitive stomach. Alternative: Local butter and natural cream as clean fat sources
PROHIBITED	Raw Onion and Garlic The source prohibits eating them raw and prefers avoiding them even in cooking. Alternative: Natural spices, thyme, natural vinegar
PROHIBITED	Cucumber, Zucchini and Carrot Watery or fibrous vegetables described as difficult for the colon; the source says carrot benefits are exaggerated. Alternative: Potatoes, sweet potatoes, cooked pumpkin

MEDICINES AND INDUSTRIAL SUBSTANCES

3 items · with allowed alternatives

The source states that the body does not need industrial supplements, but clean inputs so it can repair itself

PROHIBITED	Chemical Medicines and Supplements Painkillers, fever reducers, synthetic vitamins, antacids - described as burdening the liver during breakdown. Alternative: Natural remedies listed in the source: honey, frankincense, mastic, herbs
PROHIBITED	Antibiotics and Blood-Pressure/Diabetes Medicines Side effects are described as disturbing body balance; the page explicitly says to consult your own physician. Alternative: Under medical supervision: the source presents the Al-Tayyibat System as addressing root causes
PROHIBITED	Concentrated Seeds (Psyllium, Flax, Chia) Seeds outside the full context of the plant are described as creating a nutrient excess that is difficult to regulate. Alternative: Sesame in tahini; whole nuts

CHAPTER FOUR

SCIENTIFIC THEORIES

Five of the doctor's most important theories

Dr. Diaa Al-Awady left a scientific legacy represented by twenty-five theories that, in the book's framing, reveal hidden relationships between food and disease and rebuild our understanding of the human body on sound natural foundations.

In this chapter, five of the most important theories are selected because they form the foundation of the system. The final page gives an overview of all twenty-five. The complete details of every theory are reserved for the comprehensive edition.

"Your body is not based on extraction - your body is based on manufacturing." - The Greatest Core Principle

LIPID THEORY

The body is a factory, not an extractor - cholesterol is not the enemy

“Your body is not based on extraction - your body is based on manufacturing. Fats do not swim in the blood like oil droplets. If oil were injected into a vein, it would cause a fatal pulmonary blockage.”

Triglycerides - the real structure

Triglycerides consist of glycerol (3 carbons) plus 3 organic fatty acids. The source states they represent about 18-20% of body weight and are not a polymer but a single combined molecule. They cannot be used directly; lipase must break them down into glycerol and free organic acids.

Cholesterol - the biological wax

The book rejects the idea of cholesterol as simply a harmful fat deposited in arteries. It describes cholesterol as a 27-carbon waxy alcohol made by every cell, functioning as a membrane shock absorber and structural support, electrical insulation, and a raw material for testosterone, vitamin D, and cortisol.

Why fats do not deposit in arteries

The text states that lipoprotein carriers and vessel walls both carry negative phospholipid charge and therefore repel one another. HDL, LDL, and chylomicrons are described as transport complexes rather than cholesterol itself.

Insulin and obesity

Hormone-sensitive lipase burns fat inside the cell, while insulin is described as stopping it. The source therefore frames obesity as hormonally driven expansion of fat cells and proposes reducing chronic insulin through fasting and the system.

Golden conclusion: Fats are an energy reserve, building material for membranes, and a starting point for hormones. The source frames the body as an integrated manufacturing and distribution system.

MITOCHONDRIA THEORY

The true energy factory inside your cells

"Fat is the natural energy source - sugar is emergency fuel. True burning happens only inside mitochondria."

Mitochondria - the energy factory

Every cell contains hundreds to thousands of mitochondria, organelles responsible for converting food into usable energy (ATP). The source notes that heart cells may contain about 5,000 mitochondria because they work continuously.

Preferred fuel: fat

Healthy mitochondria are described as burning fat as the main fuel through the Krebs cycle, producing abundant stable energy. Sugar is presented as fast emergency fuel for immediate needs such as sudden exertion or stress.

What damages mitochondria

Excess fast sugars, hydrogenated oils, chemical medicines, and chronic toxin exposure are presented as damaging the inner mitochondrial membrane, with consequences such as fatigue, memory weakness, heart disease, and diabetes.

Golden conclusion: Mitochondrial health equals body health. The source says mitochondria recover through natural fats, regular fasting, movement, and avoiding toxins.

SOVEREIGN BODY THEORY

The body repairs itself - you do not need to repair it, but to stop damaging it

“Health is the natural state - disease is the deviation. You do not need to repair the body; stop damaging it. Zero toxic inputs = 100% health.”

The body is created sound and complete

Allah created the human being in the best form. Every organ, cell, and mechanism is described as designed with precision. The body does not need reinvention, but respect for its natural system.

Disease is not the origin; it is the result

Chronic diseases are presented as non-random results of accumulated harmful inputs over years: processed food, chemical medicines, environmental toxins, and chronic stress. Symptoms are described as a cry for help.

Stop the damage first

Before looking for a new treatment, the theory asks what is being introduced daily that causes harm. Stopping harmful inputs is presented as 90% of recovery, with the rest performed by the body's own mechanisms.

Golden conclusion: Respect the sovereignty of your body. Give it natural food and rest, and the source says its self-healing capacity will become evident.

COLON-SCIATICA THEORY

Back pain begins in the colon

“Much of what is called sciatica or a lower-back disc problem originates, according to this theory, from colon bloating and gas pressing on nerves and vessels in the pelvis.”

The digestive system and the nerves

The colon is anatomically close to the sciatic nerve and nerves emerging from the lower spine. The theory states that chronic bloating and constipation may press on these nerves and cause pain radiating to the thigh and leg.

Foods presented as causes

Dairy, legumes, raw leafy greens, salads, and white flour are described as producing chronic gas and bloating. Over time, the colon is presented as becoming distended and compressive.

Treat through the system, not medicine

Instead of painkillers and anti-inflammatory drugs, the theory proposes addressing the source through the food system, fasting, and natural vinegar, with the claim that back pain may then improve.

Golden conclusion: Understand the body as one system. The theory frames some cases of sciatica, knee pain, and headache as originating in the stomach and colon rather than the painful organ itself.

CANCER ORIGIN THEORY

Cancer is a result, not a beginning

“Cancer does not begin in the cell - but on your plate. It does not arise suddenly - it is made slowly inside a suffocating environment.”

The cellular environment first

The theory says a cell does not become cancerous at random, but in response to a toxic surrounding environment: low oxygen, acid buildup, chronic inflammation, nutrient deficiency, and toxin accumulation. Cancer is framed as a final defensive response in an impossible environment.

Interstitial tissue - 20 kg of neglect

Between cells is a large interstitial tissue compartment (described as about 20 kg in an adult) carrying fluids, nutrients, and signals. When inflamed or calcified by poor food, the theory says oxygen delivery is restricted and waste accumulates.

Treatment means preventing the carcinogenic environment

Rather than focusing only on killing cells, the theory argues for changing the environment through natural food, oxygenation through movement, fasting to stimulate autophagy, bowel cleansing, and reducing chronic inflammation.

Golden conclusion: The source says you cannot nourish a cell trapped in toxins and frames cancer as a message from the body that the whole environment must change.

DR. DIAA'S 25 THEORIES

A scientific legacy building a new understanding of the human body

The previous pages presented five of the doctor's most important theories. Below is the list shown in the original abridged edition. Full detail is reserved for the comprehensive edition.

1. Lipid Theory

Cholesterol is a biological wax, not an enemy.

2. Mitochondria Theory

The true energy factory in cells.

3. Sugar & Gluconeogenesis

How your body makes its own sugar.

4. H. pylori / Stomach Germ

The proposed real cause of ulcers.

5. Colon Theory

The relationship between the colon and sciatica.

6. Digestive Factory

The digestive tract as an integrated factory.

7. Digestive Hormones

The digestive-hormonal axis.

8. Fluid Map

How fluids move through the body.

9. Interstitial Tissue

Twenty kilograms of forgotten tissue.

10. Cancer Origin

Cancer is a result, not a beginning.

11. Cancer's Mission

Cancer as the body's last defense.

12. Blood Pressure

Blood pressure begins in the mouth.

13. Headache

Headache originates in the stomach.

14. Insulin Paradox

Insulin and cortisol.

15. Insulin & Cortisol

A conflict of hormones.

16. No Insulin Resistance

A rejection of the resistance concept.

17. Pituitary Axis

The center of hormonal control.

18. Sovereign Body

The body repairs itself.

19. Sugar & Acetone

A survival mechanism.

20. Bacterial Balance

Friendly bacteria.

21. Frozen Pelvis

The truth about pelvic pain.

22. Mitral Valve

The mitral-valve theory.

23. Pressure & Gas

Pressure and gas.

24. Joints

The joint theory.

WORDS OF THE DOCTOR

Quotations that reshape understanding

Words Dr. Diaa used to say with the steadiness of a scholar and the passion of a teacher - words presented in the book as challenging false certainty and opening doors to truth.

"Cancer does not begin in the cell - but on your plate."

- Digestive-hormonal axis

"Cancer does not arise suddenly - it is made slowly inside a suffocating environment."

- Interstitial tissue and cancer origin

"Sugar is not the disease - it is the final cry of a body whose center has become disturbed."

- Pituitary-axis disturbance

"Health is the natural state - disease is the deviation."

- Sovereign Body

"You cannot nourish a cell trapped in toxins."

- Interstitial fibrosis and Alzheimer's

"You do not need to repair the body - you need to stop damaging it."

- Sovereign Body

"Giving insulin during stress - cells starve despite the presence of sugar."

- Insulin-cortisol conflict

"Do not treat the organ - understand the pelvis as one system."

- Hardened pelvis and fistulas

✦ THE GREATEST CORE PRINCIPLE ✦

YOUR BODY IS NOT BASED ON EXTRACTION

YOUR BODY IS BASED ON MANUFACTURING

This is the great conclusion of all Dr. Diaa's theories, may Allah have mercy on him. All you need to do is provide the correct inputs and allow toxins to leave - and the body manufactures everything it needs, by Allah's permission.

- Dr. Diaa Al-Awady, may Allah have mercy on him -

BEFORE THE END

PRACTICAL APPLICATION

From theory to the table

You have read the theories, understood the philosophy, and learned the allowed and prohibited foods - but knowledge without application is not enough. This final chapter gives practical tools with which you can begin your journey with the Al-Tayyibat System today.

On the following pages you will find a seven-day weekly meal plan with three meals per day, and frequently asked questions covering children, invitations and gatherings, results, and other common concerns.

"Knowledge without application is like a tree without fruit." - A saying attributed in the book to the doctor

WEEKLY MEAL PLAN

A practical model for seven full days

This is a suggested plan. You may exchange allowed foods between days. The source treats weekly fasting on Monday and Thursday as essential, with fish once weekly and red meat in rotation.

SATURDAY <i>Balanced start - all staple groups</i> Breakfast Whole-wheat toast + local butter + honey + Turkish coffee Lunch White rice + boiled veal + potatoes mashed with butter Dinner Roasted sweet potato + cream + dates	
SUNDAY <i>Fish day - weekly omega-3</i> Breakfast Dates + coffee + molasses Lunch Basmati rice + grilled sardines (from the sea only) Dinner A little lemon + banana + nuts (almond/cashew) + green tea	
MONDAY <i>Fasting day - mitochondrial renewal</i> Breakfast Fasting (Sunnah) Lunch Break fast: dates + warm water; then rice + stuffed vegetables Dinner Tahini halva + Turkish coffee	
TUESDAY <i>Protein day - lamb once weekly</i> Breakfast Toast + Gouda + Kalamata olives + green tea Lunch Rice with vermicelli + grilled lamb with salt and oil Dinner Black grapes + cream with honey	
WEDNESDAY <i>Liver day - source of vitamin A and iron</i> Breakfast Bee honey + dark cocoa + coffee Lunch Liver with a simple sauce + rice Dinner Pomegranate + nuts + green tea	
THURSDAY <i>Second fasting day - deep cleansing</i> Breakfast Fasting (Sunnah) Lunch Break fast: dates + water; then rice + grilled pigeon Dinner Dates + nuts + cream	
FRIDAY <i>Family day - balanced celebratory meal</i> Breakfast Toast + butter + fig jam + coffee Lunch Rice with nuts + boiled rabbit + potatoes Dinner Fresh figs + banana + mastic with coconut butter	

FREQUENTLY ASKED QUESTIONS

The doctor's answers to the most common questions

Q Is the system suitable for children?

A Yes - the book says it is especially suitable. Children are said to need rice, potatoes, honey, and cream to build their bodies. The source identifies poultry, eggs, and modern dairy as major causes of children's problems such as bloating, allergies, and hyperactivity.

Q What should I do at invitations and gatherings?

A Eat what is available from the allowed foods (rice, meat, fruit), and politely avoid as much of the prohibited food as you can. Do not embarrass the host, but do not overwhelm yourself either. The source says a gentle refusal of sweets is better than breaking your commitment.

Q How long until I see results?

A The source states: one week to notice improved digestion and reduced bloating; one full month for deeper changes in energy, weight, and mood; three months for chronic conditions. The key it gives is full, not partial, commitment.

Q Can I lose weight with the system?

A The book says yes, automatically. It frames the system as reducing chronic insulin, which it calls the real cause of obesity, allowing the body to burn stored fat. Weekly fasting is said to strengthen this effect.

FREQUENTLY ASKED QUESTIONS (2)

The doctor's answers to the most common questions

Q Is the system suitable for people with diabetes?

A The source says the system addresses the root of the problem through its insulin theory. It explicitly says that if you take medication, consult your doctor first and do not stop suddenly. Medication doses should only change gradually under medical supervision.

Q What about eating outside the home?

A Order the simplest options: rice, grilled meat, potatoes. Avoid sauces and additions. The source considers simple traditional Eastern restaurants preferable to Western restaurants or fast food.

Q How do I handle cravings for sweets?

A The system allows honey, dates, Nutella, tahini halva, dark chocolate, and natural jams. The source presents these as enjoyable alternatives and says cravings for industrial sugars decrease over time.

Q Do I need vitamins and supplements?

A The source says no, claiming the system provides the essential nutrients and that industrial supplements burden the liver. It lists honey, royal jelly, and bee pollen as natural alternatives if support is needed.

THIS IS AN ABRIDGED EDITION

The comprehensive edition is coming soon, Allah willing

What you have in your hands is a concentrated summary of the most prominent parts of the Al-Tayyibat System. The complete comprehensive edition is under preparation and, Allah willing, will include:

All allowed foods (90+ items)

All prohibited foods (81+ items)

All 25 theories in detail

Weekly plans and meal examples

Al-Tayyibat plate recipes

Real experiences and testimonials

Follow the complete edition at:

altayebaat.com

THANK YOU

If you have benefited from this book, pray for Dr. Diaa Al-Awady, may Allah have mercy on him, asking for mercy and forgiveness, and share the book with those you love - for the one who guides to goodness is like the one who does it.
